

Polypropylene

We use recyclable virgin polypropylene in our furniture production. The pure polypropylene offers high resistance and durability, which ensure a long lifetime for the product.

Environmental profile:

Polypropylene consumes low energy during production.

It produces low carbon dioxide emissions when compared to other polymers.

It can be recycled several times and be used in many different applications.

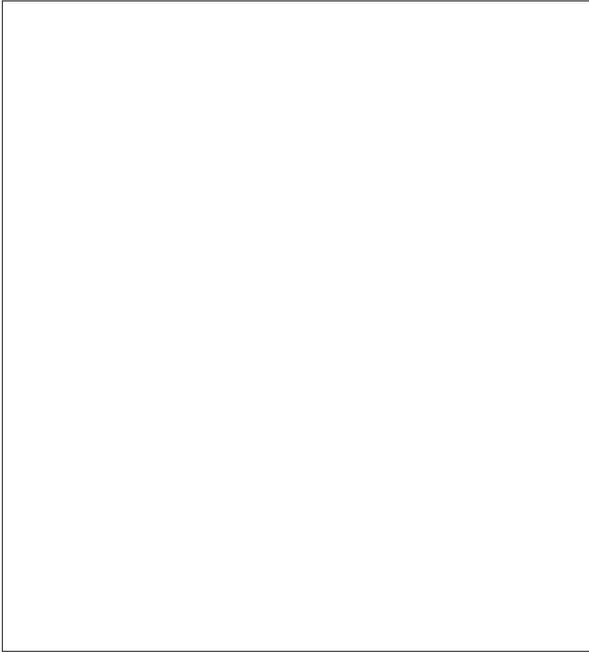

Recycling or reclamation of the PP and other polymers should always be encouraged when possible. Our chairs are clearly marked with the material and recycling symbol.
